# software carpentry

Do you spend too much time wrestling with computers, and not enough doing research?

We can help

Software Carpentry offers workshops and online training to teach scientists and engineers the software development tools and techniques that will help them most.

Topics	The Unix shell Version control Testing	Python Program design Data management
Requirements	Students must have some prior programming experience, and be willing to invest two full days, plus 3-5 hours/week for 4-6 weeks.
